

Publish new version

There are currently two options how to publish a new version of an existing publication or dataset in the Research Collection.

Option 1 - Link new and previous version

You can upload the new version of your paper or dataset as a **new item** to the Research Collection. The new item can be linked to its previous version via the field "**Related publications and datasets**".

Example:

<https://www.research-collection.ethz.ch/handle/20.500.11850/186191> is a new version of

<https://www.research-collection.ethz.ch/handle/20.500.11850/130802>

Both items are linked with each other:

Related publications and datasets

Is new version of: <https://doi.org/10.3929/ethz-b-000130802> 

Option 2 - Add an additional file

You can also upload a new version as an **additional file to an existing item**.

In order to do this, proceed as described on the page [Add full texts/datasets](#) and enter "Additional file" in the "Reason for new version" field.

The updated file can be labelled "updated version" or similar.

Example:

<https://www.research-collection.ethz.ch/handle/20.500.11850/270180>

This item contains two versions of the publication:

Download

[Full text \(updated version\) \(Adobe PDF, 1.580Mb\)](#) 

[Full text \(published version\) \(Adobe PDF, 1.710Mb\)](#) 

No new version of examination papers

Please note that according to the respective ETH regulations, all examination papers (Bachelor or Master Thesis, Doctoral Thesis, Habilitation Thesis) must be published in the version accepted by the examination boards. Therefore, new versions of examination papers will not be accepted for publication in the Research Collection.
